# DHTML- BRIEF DESCRIPTION

- DHTML stands for Dynamic HTML.
- "Dynamic" is defined as the ability of the browser to alter a web page's look and style after the document has loaded.
- It just uses languages features to build dynamic web pages.

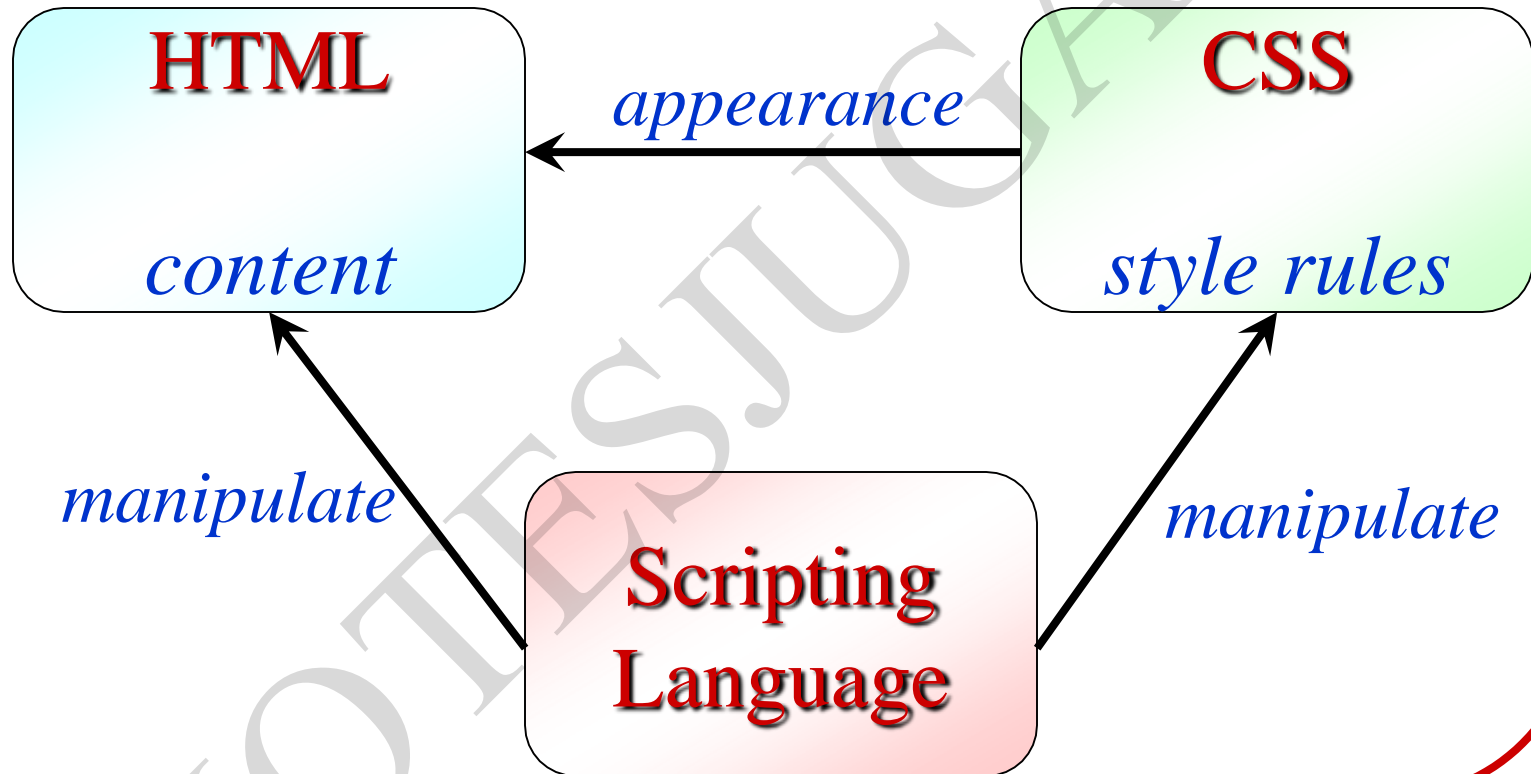

# DHTML...

- All these three components are linked via Document Object Model (DOM).
- Document Object Model is to provide a standard programming interface.
- DHTML is NOT a scripting language
- It uses different technologies.

# FEATURES OF DHTML

- Simplest feature is making the page dynamic.
- Can be used to create animations, games, applications.
- Dynamic building of web pages is simple as no plug-in is required.
- Facilitates the usage of events, methods and properties and code reuse.
- It makes the Web experience faster and more interactive for end users.

# Dynamic HTML

# ADVANTAGE OF DHTML

- DHTML can make your browser dynamic and interactive.
- Validation of input's given by the user can be done at the client side, without connection to the server.
- Content and design can be separated using Style sheets & uniformity of the site can be maintained using them.

# HTML – BRIEF DESCRIPTION

- HTML Stands for Hyper Text Markup Language.
- An HTML file is a Text file containing small markup tags.
- An HTML file can be created by using a simple Text Editor like Notepad.

# HTML

Partitions and Organizes the content

# HTML EXAMPLE

<HTML>

<HEAD>

<TITLE>Sample</TITLE>

</HEAD>

<BODY>

<P><h1><b>This is a sample paragraph</b></h1></P>

</BODY>

</HTML>

# CSS

## [ CASCADING STYLE SHEETS ]

CSS: Box Model

Content

# CSS- BRIEF DESCRIPTION

- Cascading Style Sheet
- Defining the style and layout model for HTML documents.
- There are two types implementation
  - i) Internal
  - ii) External

# CSS EXAMPLE

CSS

```
<STYLE TYPE="text/css">
  BODY {
    background-color: #CCCCCC;
  }

  P {
    border: 1px solid black;
    background-color: #FFFFFF;
    margin-bottom: 1px;
  }
</STYLE>
```

[Content](#)

# SCRIPTING (JAVA SCRIPT , VB SCRIPT)

- Allows you to add conditional, client-side logic and behavior to your document.
- Fully object-oriented, DOM interaction and more.

# JAVASCRIPT EXAMPLE

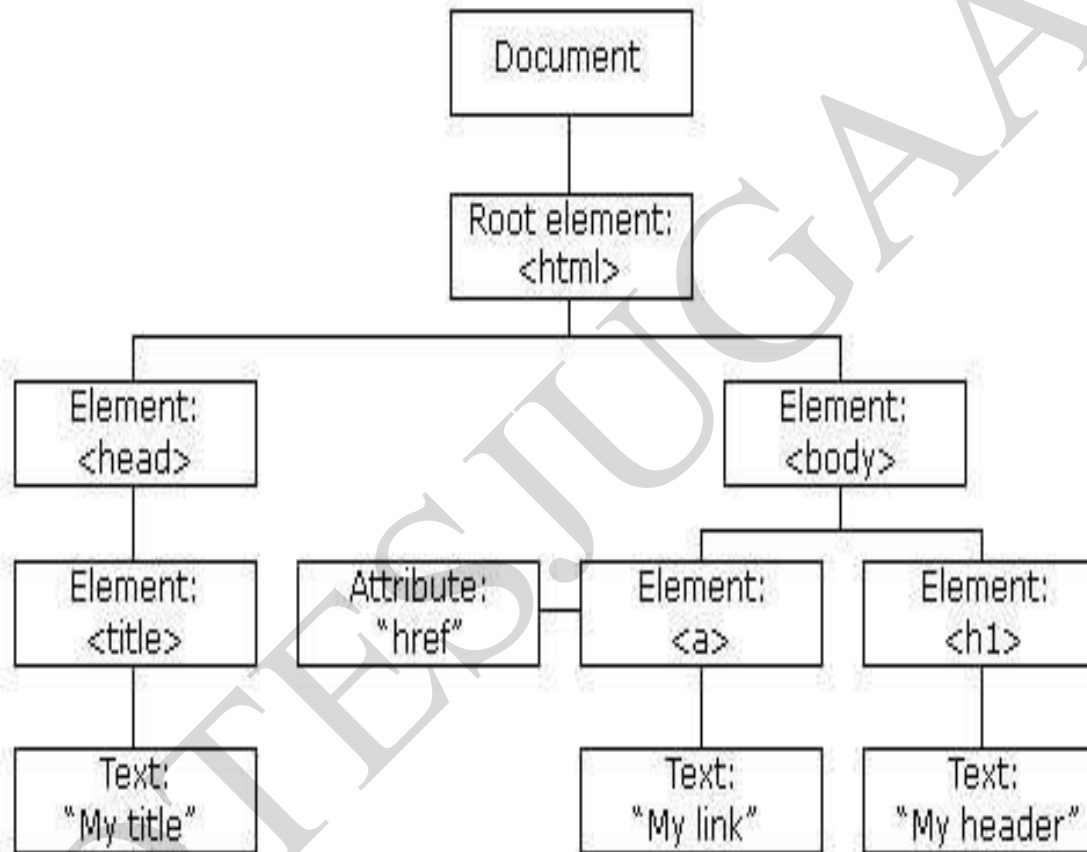

```
<script type="text/javascript">  
    function display_message()  
    {  
        document.write("\n This is a message");  
        var x=4;  
        document.write("\n Integer value of x"+x);  
        var x="It is a String";  
        document.write("\n String value of x"+x);  
    };  
</script>
```

# DOM INTRODUCTION

- DOM stands for Data Object Model.
- The DOM is a W3C (World Wide Web Consortium) standard.
- *"The W3C Document Object Model (DOM) is a platform and language-neutral interface that allows programs and scripts to dynamically access and update the content, structure, and style of a document."*

# HTML DOM TREE

# ADVANTAGE OF DOM

- The Document Object Model is a platform- and language-neutral interface.
- Defines a hierarchical model of the document structure through which all document elements may be accessed.
- Relatively simple to modify data structure and extract data.
